

Nikki Ounsworth

Founding Partner at COOCI Associates LLP,
Neurological Rehabilitation Case Manager &
Registered General Nurse

Location: Buckinghamshire

Summary of patient expertise and specialist training:

Nikki is highly experienced in neurological injuries, having specialised in the treatment and management of neurological conditions across her career as a Registered Nurse, which commenced in 1991. In addition to her clinical and managerial experience, Nikki has also undertaken additional specialist education such as completing a Bachelor's Degree in Neurological Rehabilitation and commencing a PhD programme relating to fatigue and Multiple Sclerosis.

Nikki's first-hand knowledge and training encompasses **children, young adults and older adults with a range of neurological injuries**, including many with significant additional medical complexities.

Nikki is also a highly-trained, experienced and well-respected Case Manager. She is particularly skilled in assisting her clients psychologically, helping them mentally adjust to their injury challenges and supporting their emotional, as well as medical needs. She is experienced in the following areas:

- Acquired Brain Injury including mild, moderate and severe
- Complete and incomplete spinal cord injuries, at differing levels of the spinal column
- Amputation
- Cerebral Palsy
- Sensory impairments including visual and vestibular impairments
- Mental health disorders
- Epilepsy
- Complex orthopaedic trauma

Nikki has an organised approach and remains calm under pressure, **ensuring that her clients and their families feel safe in her hands**. She has an exceptionally strong work ethic and is highly committed to ensuring her clients are proactively and thoughtfully supported.

Case Management skills:

The smooth running of any case is crucial for the comfort and well-being of our clients. Nikki's experience in proactively managing a case from the outset is second to none. Her skills include:

- Immediate Needs Assessments
- Case Management Action Plans and Progress Reports
- Understanding of the requirements of the litigation process
- Utilising sports to benefit her clients
- Set-up and management of community care packages
- Safeguarding and Risk Assessment
- Mental Capacity Act
- Managing challenging behaviours

- 2015: Medication Matters
- 2014: Welfare Benefits
- 2014: Mandatory Training
- 2014: Education Issues – New Education and Health Care Plan
- 2013: Exploring Overlooked Issues in Brain Injury

- 2013: Infection Control
- 2013: Health and Safety
- 2013: BABICM: Shared Responsibility or Conflicting Priorities
- 2013: Purchasing and Adapting Properties

Employment:

COOCI Associates - from 2009

Founding Partner and Neurological Rehabilitation Case Manager

- Set up COOCI Associates in partnership with a team of nurses and health care professionals, whilst managing a diverse caseload of complex clients.
- Supported clients and families with a range of issues including major home modifications, setting up and managing community care teams, holiday arrangements, vehicle procurement, benefit applications, educational appeals, and returning to work.
- Worked in situations with complex family dynamics, including child protection.
- Set up numerous community care packages in a range of formats.

***Example of client goal achievement:** Anecdotal evidence and the literature identifies that Brain Injured clients self-report significantly higher sleep-related impairment, poorer nightly sleep quality and more frequently met criteria for clinical insomnia. This has a huge bearing on the overall functioning of the brain injured individual and may impact on their ability to progress to their potential.*

Working in the community we provide care for brain injured individuals with complex health and social care needs at home, the majority of whom present with significant sleep disruption and/or fatigue. This can be one of their most disabling problems which impacts negatively on their overall wellbeing and level of engagement in life and living.

One of my clients presented with a disrupted sleep awake cycle and had a range of other complex needs, compromised further by unstable epilepsy. A Sleep Actigraphy assessment was carried out to determine sleep patterns and circadian rhythms for a designated period of time to map sleep and activity over a 24/7 period. The data was used to help the multidisciplinary team to put a sleep management programme in place that avoided the use of medication.

This was appealing as it also enabled an objective assessment to be carried out that did not rely solely on carer diaries, as well as relying on the client to recall how many times they woke or how long they slept for during the night. There was also an added benefit of analysing other clinical data such as seizure activity which often has a negative impact on sleep and fatigue during the day. An added benefit was that it could be carried out in the comfort and privacy of the client's own home enabling sleep data to be more realistic than that of a hospital environment.

Over time the multidisciplinary team we able to implement a behavioural programme which established a more effective sleep awake cycle which was scaffolded by the carers as the client was unable to initiate this himself. It increased his periods of wakefulness and interaction with an increasing body of evidence to support his ongoing emergence from a minimally conscious state. The implementation of an effective schedule enabled positive gains in other aspects of his care including pain, seizure activity, mood and grabbing behaviours.

Bush and Company – Brain Injury Case Manager and Expert Witness. April 2006 to July 2009

- Facilitated for the health and social needs of clients who had sustained catastrophic injuries
- Completed Care and Case Management Expert Witness Reports

Brunel University – Honorary Research Student. 2006 to 2008
Research Faculty.
